

SEARCH FOR SEAWEED!

An indoor scavenger hunt

Are you brushing your teeth with seaweed? Maybe you're eating it in your ice cream? There's a really good chance that you are using seaweed everyday without even realizing it. That's because seaweed, like **Giant Kelp**, is one of the ocean's greatest **renewable resources**. Giant Kelp is a species of brown algae that grows 2-3 feet every day! That means there should always be plenty for people to use! Ingredients called **algins** and **alginates** come from kelp and are used in all kinds of household products, like foods, beauty and hygiene supplies, and medicines.

See how many seaweed products you're already using by searching your house for the following items. Circle the item if the ingredients list says: kelp extract, agar, algin, or alginate. You should also add your own discoveries!

KITCHEN

Salad Dressing

Ice Cream

Yogurt

Jello
